EDUCATION

Cornell University

Ithaca, NY

Bachelor of Science in Computer Science, GPA: 4.11/4.00

Expected: May 2028

- Relevant Coursework: Data Structures and Object-Oriented Programming, Mathematical Foundations of Computing, Functional Programming (OCaml), Intro to Backend Development, Linear Algebra

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL, OCaml

Backend & APIs: RESTful APIs, GraphQL, Flask, FastAPI, NoSQL, Node.js, SQLAlchemy

Infrastructure & Tools: Docker, Kubernetes, KEDA, Celery, Redis, AWS, Supabase, Firebase, PostgreSQL, MySQL, MongoDB, GCP, Postman, Linux/Unix, Git, GitHub Actions CI/CD, Prisma

EXPERIENCE

Sitefit AI

Remote, USA

Software Engineering Intern

Jun. 2026 – Aug. 2026

- Built a spatial layout engine that auto-generates parking layouts on real parcel shapes, fitting **1,300+** parking spaces within a set compute budget
- Cut p95 export latency **~99% (74ms to 0.06ms)** by moving PDF/DXF/IFC/DAE generation off the request thread into a **Postgres**-backed background job queue
- Created a CLI tool with headless SVG rendering to preview site plans instantly, replacing a slow full-app workflow and becoming the team's go-to debugging tool

Hack4Impact Cornell

Ithaca, NY

Developer

Nov. 2025 – Present

- Developed **Internal Member Archive**, a full-stack alumni database connecting the **1,000+** member national Hack4Impact network spanning **12** chapters internationally
- Implemented login/logout API routes in Next.js with **bcrypt** hashing, **Zod** schema validation, and session management, covered by **Vitest** unit tests
- Reviewed PRs and performed API testing in an 80+ engineer team in Agile sprints to meet nonprofit client goals

Cornell Ezra Systems Research Group

Ithaca, NY

Student Researcher

Jan. 2026 – May 2026

- Engineered a real-time data ingestion pipeline behind Next.js serverless API routes, integrating external weather services and serving normalized live metrics across five cities for published urban-modeling research
- Architected a sun/shade routing engine for walking and cycling modes, refactoring **800+** lines to resolve marker-clustering bugs and cut map re-render time by **30%**

Coding Minds

Irvine, CA

Software Engineering Intern

Jun. 2024 – Jul. 2024

- Built an Android nutrition-tracking demo app from scratch with **Flutter**, **Firebase**, and **TensorFlow Lite** to deliver personalized dietary insights
- Designed and deployed a **RESTful API** with **Python** and **Flask** to serve as the app's data-processing backend
- Tuned model parameters to improve prediction accuracy from **40% to 66%** using a dataset of **101,000+** images

PROJECTS

MindDo AI Student Showcase | *FastAPI, Celery, Redis, Kubernetes, KEDA, AWS, Playwright*

2026

- Engineered an automated pipeline for MindDo.ai that converts any website URL into a narrated demo video, AI-written summary, printable flyer, and QR code using Playwright, Claude Sonnet, OpenAI TTS, and ffmpeg
- Deployed on **AWS (EC2, S3)** with **k3s**, autoscaling **Celery** workers on **Redis** queue depth via **KEDA**; under a **20-job** load test the cluster scaled **1 to 4** workers in **17s** and finished all **20** jobs
- Cut repeat-submission latency **~99% (30s to 0.14s)** with a content-addressed cache keyed on page-content hash

Luminary - Study Tracker App | *Flask, SQLAlchemy, Docker, GCP (Google Cloud Platform)*

2025

- Led backend development for a **5-person** team, building **25+** REST endpoints with per-minute user progress sync
- Designed the multi-user session schema, containerized with Docker, and shipped a live GCP deployment
- Shipped a complete OpenAPI spec and won best Overall App from 12 teams at the 2025 AppDev Hack Challenge
