EDUCATION

Cornell University

Ithaca, NY

B.S. Computer Science

Expected: 2028 | GPA: 4.00/4.00

- **Relevant Coursework:** Data Structures and OOP, Mathematical Foundations of Computing, Data Structures and Functional Programming, Introduction to Computing Using Python, Introduction to Backend Development, Linear Algebra

WORK EXPERIENCE

Hack4Impact Cornell

Ithaca, NY

Developer

Nov 2024 – Present

- Developed **IMA (Internal Member Archive)**, a full-stack alumni database for Hack4Impact, serving as the networking hub for the organization's 100+ members across graduating classes
- Implemented secure password-based authentication using **bcrypt** and building login/logout API routes with **Zod schema validation**, built with Next.js, TypeScript, and Supabase

Coding Minds

Irvine, CA

Software Engineering Intern

June 2024 – July 2024

- Created a demo Android nutrition tracking app from scratch using **Flutter**, integrating **Firebase**, and **TensorFlow Lite** to deliver personalized dietary insights
- Designed and deployed a **RESTful API** using **Python** and **Flask** to serve as the backend for data processing
- Tested and adjusted model parameters to improve prediction accuracy from 40% to 66% using a custom dataset of 101,000+ food images

PROJECTS

Luminary - Study Tracker App | *Flask, SQLAlchemy, Docker, GCP*

- Built a 25+ endpoint **Flask/SQLAlchemy** REST API backend (users, constellations, attempts, sessions, posts, feed) with automatic minute sync and star-based progress tracking; containerized with **Docker** and deployed on **GCP**
- Designed a 5-table relational schema (Users, Constellations, Attempts, Sessions, Posts) with cascading progress updates and completion workflows; shipped full API spec with request/response examples and validation rules
- Recognized “Best Overall App” at the 2025 AppDev Hack Challenge out of 12 teams

Boroughs - NYC Housing Compatibility Finder | *Flask, React, scikit-learn, Tailwind*

- Built a full-stack web application that recommends ideal NYC neighborhoods by combining ML-based housing price predictions with lifestyle compatibility scoring
- Integrated an advanced **scikit-learn** model trained on 4K+ row dataset to forecast current and future NYC housing prices (`advanced_house_price_model.joblib`)
- Awarded #1 Live Right Award at the Cornell Claude Hackathon (100+ participants)

NoteForm – Piano Posture Analysis App | *iOS, Flask, Mediapipe, Firebase*

- Developed iOS application using **Mediapipe hand landmarks** machine learning to analyze piano hand posture with real-time feedback
- Integrated **Firebase** database for progress tracking, enabling users to monitor improvement over time through comprehensive history logging
- Achieved 1st place at IgniteCS Programming Expo 2024 in Software Applications and Systems category

LEADERSHIP & ACTIVITIES

CyberPatriot Cybersecurity Competition Team

2022 – 2025

National Finalist

- Taught advanced **Windows cybersecurity** concepts to 150+ students, improving overall school performance

TECHNICAL SKILLS

Languages: Python, Java, OCaml, HTML, Dart, SQL, PowerShell

Frameworks: Flutter, Firebase, Mediapipe, OpenAI API, Flask, Supabase

Concepts: Full-Stack Development, API Design, Authentication, Containerization, Cross-Platform Apps
