EDUCATION

Cornell University

Ithaca, NY

Bachelor of Science in Computer Science — GPA: 4.11/4.00

Expected: May 2028

- Relevant Coursework: Data Structures and Object-Oriented Programming, Mathematical Foundations of Computing, Functional Programming (OCaml), Intro to Backend Development, Linear Algebra

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL, OCaml

Backend & APIs: RESTful APIs, GraphQL, Flask, FastAPI, NoSQL, Node.js, SQLAlchemy

Infrastructure & Tools: Docker, Kubernetes, Redis, Supabase, Firebase, PostgreSQL, MySQL, MongoDB, GCP, Postman, Linux/Unix, Git, GitHub Actions CI/CD, Prisma

EXPERIENCE

Hack4Impact Cornell

Ithaca, NY

Developer

Nov. 2025 – Present

- Developed **Internal Member Archive**, a full-stack alumni database connecting the 1000+ member national Hack4Impact network spanning 12 chapters internationally
- Built login/logout API routes in Next.js with **bcrypt** hashing, **Zod** schema validation, and session management, covered by **Vitest** unit tests
- Seeded a **Prisma**-managed PostgreSQL database with relational fixture data to validate API behavior end-to-end
- Reviewed PRs and performed API testing in an 80+ engineer team in Agile sprints to meet nonprofit client goals

Sunlight City Research Group

Ithaca, NY

Student Researcher

Jan. 2026 – May 2026

- Engineered a real-time data ingestion pipeline behind Next.js serverless API routes, integrating external weather services and serving normalized live metrics across five cities for published urban-modeling research
- Built a sun/shade routing engine for walking and cycling modes, refactoring 800+ lines to resolve marker-clustering bugs and cut map re-render time by 30%

Coding Minds

Irvine, CA

Software Engineering Intern

Jun. 2024 – Jul. 2024

- Built an Android nutrition-tracking demo app from scratch with **Flutter**, **Firebase**, and **TensorFlow Lite** to deliver personalized dietary insights
- Designed and deployed a **RESTful API** with **Python** and **Flask** to serve as the app's data-processing backend
- Tuned model parameters to improve prediction accuracy from 40% to 66% using a dataset of 101,000+ food images

PROJECTS

MindDo AI Student Showcase | *FastAPI, Docker, Redis, Kubernetes, Supabase, Playwright*

2026

- Built an automated pipeline for MindDo.ai that converts any website URL into a narrated demo video, AI-written summary, printable flyer, and QR code using Playwright, Claude Sonnet, OpenAI TTS, and ffmpeg
- Reduced generation cost to ~\$0.04 per showcase by caching results keyed to URL content hashes in Supabase
- Containerized as decoupled API and Celery worker services on Docker; deployed k3d cluster with KEDA autoscaling on **Redis** queue depth; load-tested under 20 concurrent jobs, scaling 1→4 workers in ~5s

Luminary - Study Tracker App | *Flask, SQLAlchemy, Docker, GCP*

2025

- Built a full-stack study tracker with a 25+ endpoint REST API backend, automatic minute synchronization, and star-based progress tracking
- Designed a five-table schema, containerized the app with Docker, and deployed it on Google Cloud Platform
- Shipped a complete API specification and won Best Overall App at the 2025 AppDev Hack Challenge

Boroughs - NYC Housing Compatibility Finder | *Flask, React, scikit-learn, Tailwind*

2025

- Built a full-stack web application that recommends ideal NYC neighborhoods by combining ML-based housing price predictions with lifestyle compatibility scoring
- Integrated an advanced **scikit-learn** model trained on a 4K+ row dataset to forecast current and future NYC housing prices
- Won the Live Right Award at the Cornell Claude Hackathon with 100+ participants
